

C++ Tutorials

(01)

Q ⇒ What is C++? C++ Introduction and History.

Ans ⇒ C++ is a high-level "Semi-object oriented" programming language developed by "Bjarne Stroustrup" in 1979 at "Bell Labs."

⇒ C++ is a "general purpose", "case-sensitive", "free-form" programming language that supports "object-oriented", procedural and generic programming.

⇒ C++ is a "middle-level" language as it encapsulates both high and low level language features.

⇒ In earlier the name of C++ was "C with Classes".

⇒ It is an imperative and a compiled language.
